Objective

Motivated and detail-oriented Computer Science student with a strong foundation in machine learning, algorithms, and data analysis. Seeking opportunities to apply my technical skills in machine learning and problem-solving to real-world projects, contributing to innovative solutions and furthering my expertise in the field. This keeps it professional while reflecting your beginner status and eagerness to grow.

Education

Rajiv Gandhi University of Knowledge Technologies, Andhra Pradesh

Bachelor of Technology in Computer Science Engineering* (Expected April 2026))

CGPA: 8.8

Rajiv Gandhi University of Knowledge Technologies, Andhra Pradesh

Intermediate Education* (Completed April 2020)

CGPA: 9.88

Work Experience

2024 Team Member, Hackathon - Techniverse 2024, Srikakulam, RGUKT

Worked with developers, data scientists, and experts in a 48-hour hackathon to create a machine learning prototype focused on classification and regression. Contributed to building models, preprocessing data, and optimizing performance using techniques like feature selection and hyperparameter tuning. Overcame challenges by improving data quality, fine-tuning algorithms, and iterating quickly, delivering an accurate and reliable predictive system.

Projects

Traffic Flow Prediction :

Developed a machine learning model for Traffic Flow Prediction using regression and classification techniques. Processed and analyzed real-world traffic data to predict vehicle flow and congestion patterns. Implemented feature engineering, hyperparameter tuning, and model optimization to improve accuracy. Used advanced machine learning algorithms to classify traffic conditions and forecast future trends, enhancing decision-making for traffic management systems.

Tools : Numpy, Pandas, Sk-Learn, sea-Born, Logistic-Regression.

gitHub Link :

Student-Dropout-And-academic-Success-Predictor

Developed a machine learning model to predict student dropout risk and academic success using regression and classification techniques. Analyzed student performance data, attendance records, and socio-economic factors to identify key patterns. Applied feature engineering, hyperparameter tuning, and model optimization to improve prediction accuracy. The system helps educational institutions take proactive measures to support at-risk students and enhance academic outcomes.

Tools : Numpy, Pandas, Sk-Learn, sea-Born, Logistic-Regression.

Skills

Languages: Python, C, Java, Latex, Javascript.

Machine Learning : Supervised / UnsuperVised Learning, Neural Networks.

Data Structures And Algorithms: Problem Solving using Java And Python, SQL

Data Analysis : Numpy, Pandas ,Matplotlib, sk-Learn, Sea-Born.

Tools: GitHub, VS Code, Jupyter Notebook

Soft Skills: Teamwork, Communication, Problem-Solving.
